

IN THE SPECIFICATION:

As noted in paragraph 6 of the accompanying Request for Filing a Continuation Application, the specification has been amended, as follows: At page 1, line 2, directly beneath the application title, but before the heading of "Reservation of Copyright," please add:

RELATED APPLICATIONS

This application is a divisional of U.S. patent application serial No. 09/766,594, filed January 23, 2001, now U.S. Patent No. \_\_\_\_\_.

Additionally, the paragraph at page 1, line 19, is changed as follows:

Recent technical advances are enabling more and more data being recorded, stored, and delivered over IP Internet Protocol (IP). Data acquisition devices such as cameras are becoming commodities with low cost yet high quality. Disk storage technology is riding a Moore's law curve and is currently at a dollar-per-megabyte point that makes huge digital content archive practical. Optical network and cable modems are bringing megabit bandwidth to offices and homes. Selective delivery of content is, however, less well established yet often necessary and desirable.
